

Beta Glucan Product Review

A side by side comparison of the top 5 Beta 1,3/1,6 glucan products based upon independent 3rd party analysis.

It is a highly purified particulate from the cell wall of a common baker's yeast (*Saccharomyces cerevisiae*) that yields the potent Beta 1,3 / 1,6 molecule – not cereal grains or other cheap fillers.

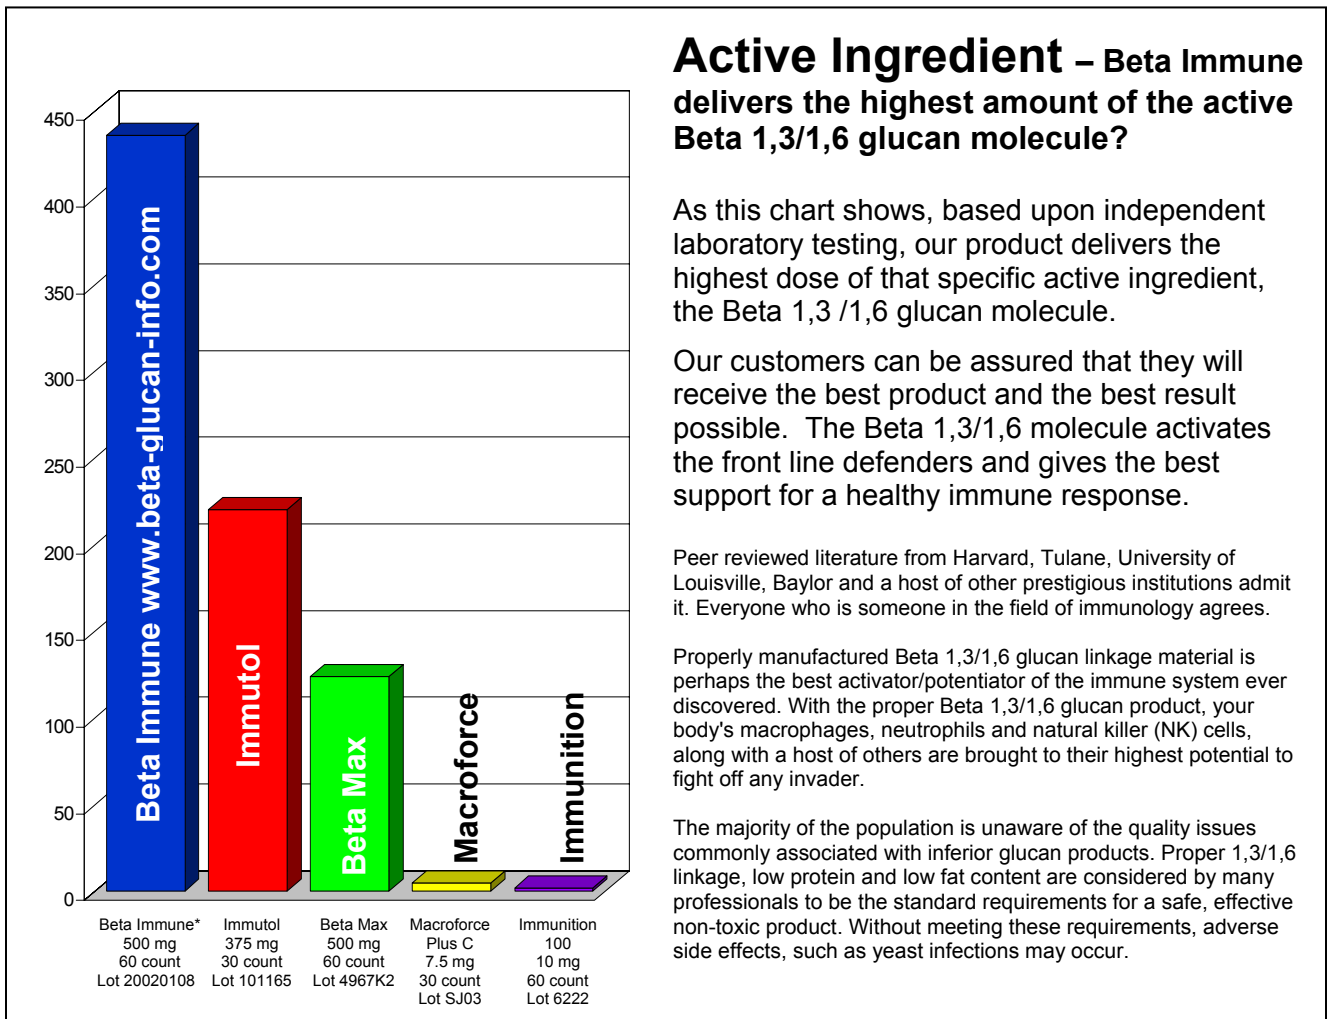

Research shows that critical cells of our immune system have specific receptors for the Beta Glucan macromolecule. It's almost as if nature "designed" beta glucan to support our immune systems.

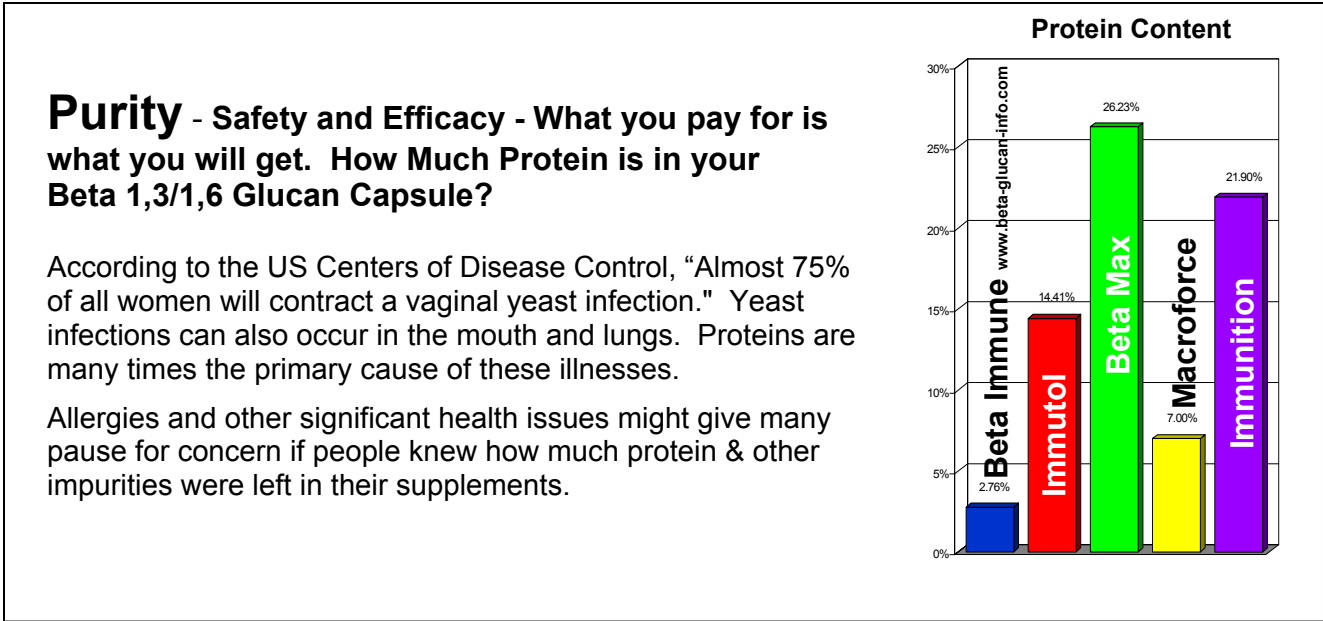

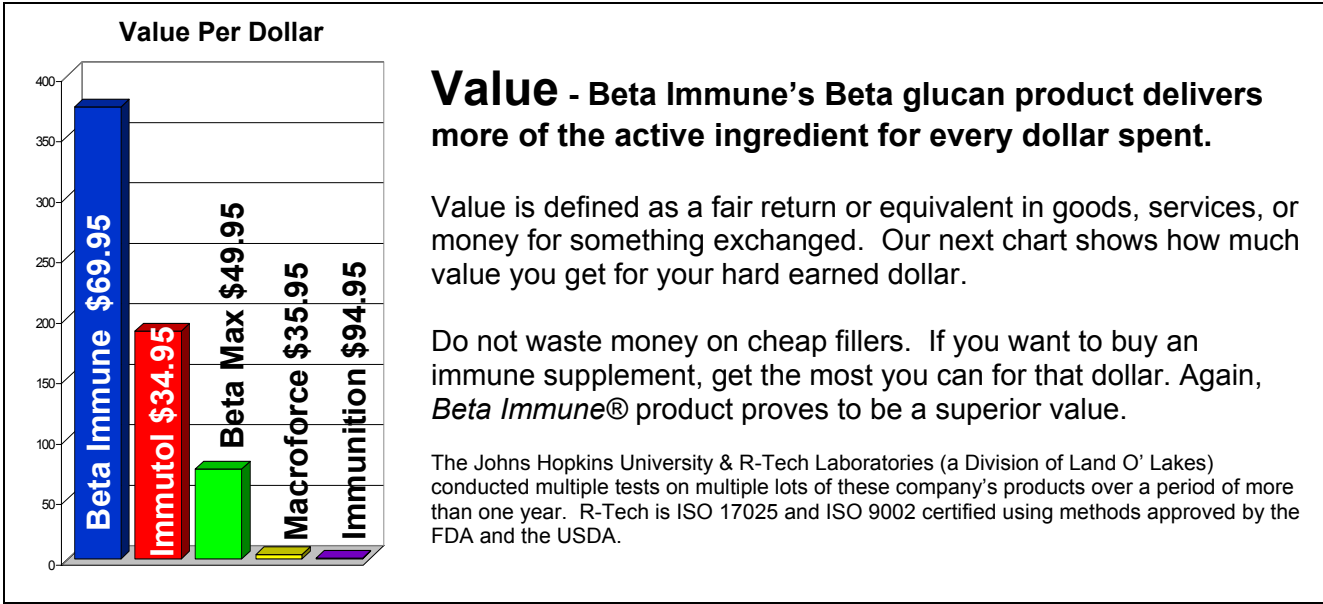

Our purification process extensively removes fats, proteins, mannans and other contaminants that others leave in to add weight and to save money. Without this extensive and costly process, you can expect that many of the other brands to be minimally purified – *at best!*

Highly contaminated products cannot accomplish the "turning on" of the glucan receptors because the Beta 1,3 / 1,6 molecule is covered and masked by the contaminants. Not only do you significantly reduce the ability to enhance a healthy immune response, many may be allergic to some of these excess impurities.

Scientific tests prove that our Beta 1, 3-D Glucan is the best in any and every category that counts.

The following charts document the test results of the top five Beta Glucan products. Sealed samples for these comparisons were purchased through ordinary retail channels. They were delivered to an independent laboratory, and all subjected to the same tests.

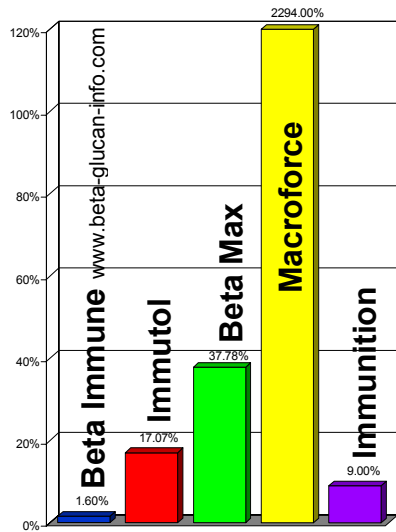

Peer reviewed literature from Harvard, Tulane, University of Louisville, Baylor and a host of other prestigious institutions admit it. Everyone who is someone in the field of immunology agrees.

Properly manufactured Beta 1,3/1,6 glucan linkage material is perhaps the best activator/potentiator of the immune system ever discovered. With the proper Beta 1,3/1,6 glucan product, your body's macrophages, neutrophils and natural killer (NK) cells, along with a host of others are brought to their highest potential to fight off any invader.

The majority of the population is unaware of the quality issues commonly associated with inferior glucan products. Proper 1,3/1,6 linkage, low protein and low fat content are considered by many professionals to be the standard requirements for a safe, effective non-toxic product. Without meeting these requirements, adverse side effects, such as yeast infections may occur.

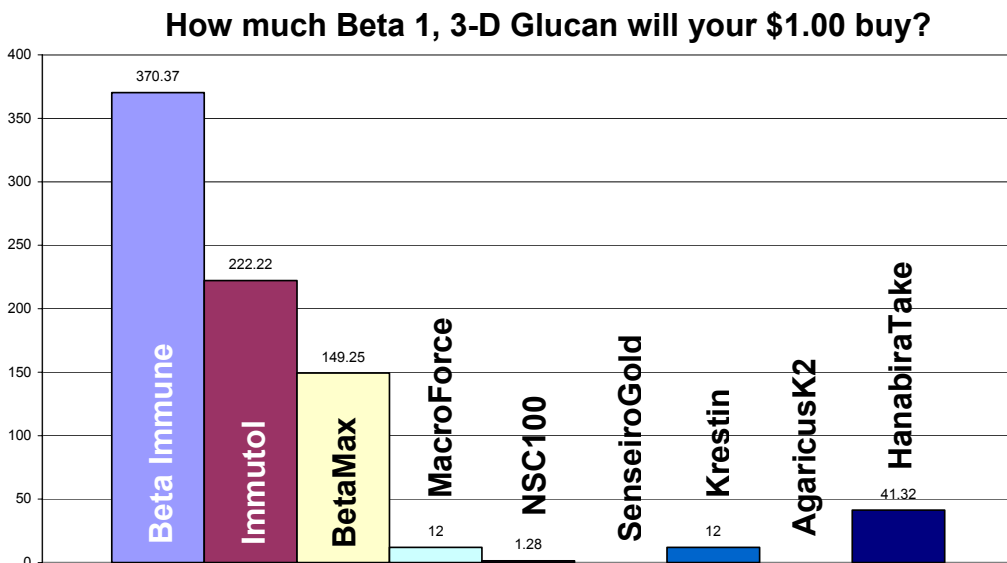

Purity is the state of being free from taint, free from adulteration, and free from that which pollutes.

Notwithstanding the lowest percentage of proteins - ash is of interest to further comment. Typically ash is the result of the digestion process where the fats and proteins are removed. Residues of salts remain unless the final product is thoroughly washed.

Once again, the great care *Beta Immune's*® takes is shown via the nearly non-detectable levels in a properly produced product. You deserve a clean, pure, and safe product. Insure your Beta glucan product meets or exceeds the results found in this brochure for a safe,

The John Hopkins University & R-Tech Laboratories (a Division of Land O' Lakes) conducted multiple tests on multiple lots of these company's products over a period of more than one year. R-Tech is ISO 17025 and ISO 9002 certified using methods approved by the FDA and the USDA.

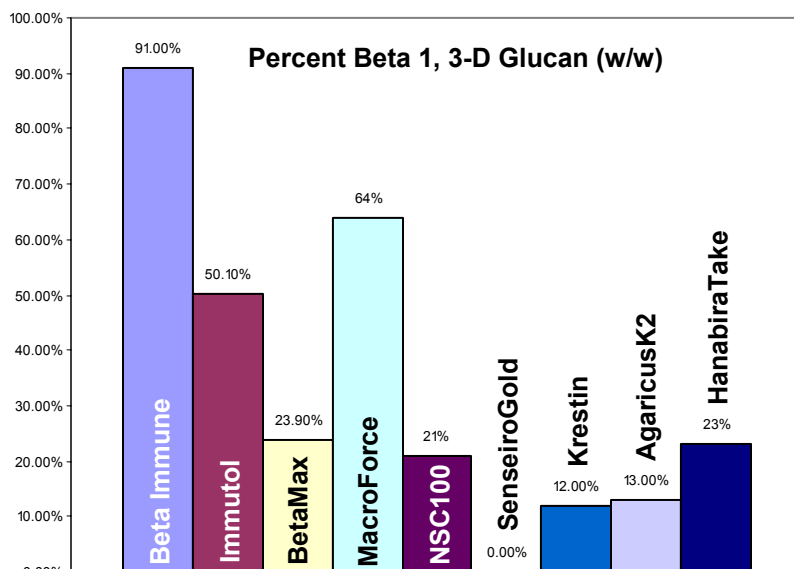

Other Independent Testing

The first thing you need to learn about buying Beta 1,3-D glucan is who not only tells you, but who certifies and guarantees a quality product that contains what the label states. Companies selling the Knock-offs

fill the capsules with ingredients that are deficient in the active 1,3/1,6 molecule that turns on the key immune cells. A capsule that weights 400-500 mg but contains ½ that in active glucan is a waste of your time and money to purchase. Buy the product that all the other companies try to be. Buy a product that allows you to calculate an effective dose for your body weight. Buy a Beta Immune product and get your monies' worth.

The second thing you learn about buying Beta 1,3-D glucan is how to get the most for your hard earned dollar. The legendary oriental mushrooms offer a great bedtime story and the counterfeit imports tell you that they are just as good as the laboratory certified, university tested and US Patented product, but Beta Immune products are the only one that delivers the key active ingredient in a dose that is effective. AND, you support a guaranteed "Made in America" product without the risk of unknown and unwanted contaminants.
